Site is a land/water interface with what is perceived as a bridge-like structure and other structures. There is a large cranelike structure building at the site. Inside, there are pungent chemical odors, the sound of heavy equipment moving about, and echoes produced because of the size of the building. There are cylindrical, unshaped (unwieldy) and heavy. There are also trailer vehicles. Evidence of building suggest preparation for maintenance activity. It is perceived as a warehouse-type building used to stockpile equipment.

There are also long, silvery cold smooth cylindrical objects (separate from those described above) that produce a sensation of [illegible] Are both like projectiles (airscrap missiles).
